Stylish additions to your home.

Our KV Custom Patio Doors come with various options and accessories to add the perfect detail to your home.

2022

Patio Door Options & Accessories

Grill Options

The options are endless.

The Internal Grill & Simulated Divided Lites are timeless designs on a patio door using horizontal and vertical bars that separate the patio door into panes. In addition to having the largest selection of grills, KV Custom Windows & Doors can also create a customized grill pattern to perfectly fit your home.

Internal Grills & Simulated Divided Lites

Our stylish internal grills, available in different grill types, colours and patterns, are a great way to help bring your patio door designs to life. Inserted into glass panes at the time of door manufacture, they don't get in the way of cleaning the glass.

Simulated divided lites add a unique look to a home while ensuring modern energy efficiency and performance. A simulated divided lite is when a patio door has grills attached to the inside and outside of the glass.

Exterior Accessories

Decorative Brickmolds

These exterior accessories will add even more beauty, value and efficiency to an already outstanding patio door.

Hardware

Traditional Hardware

Our traditional handles have a curved, smooth handle bringing a classic distinction and sophistication to your home.

Multi-Point Lock System

For maximum security, KV Custom Windows & Doors offers a Multi-point lock system that activates automatically by simply closing the door. The upper and lower latches instantly engage and become 2 additional deadbolts. The door is locked when you simply turn the knob or key, engaging the central deadbolt.

Anatomy

1. KV Imperial Patio Doors 1 3/4" sill extension
2. Custom glazing pocket designed to accept double glazed 1" overall sealed units or triple glazed 1 3/8" overall sealed units
3. Welded sash with steel reinforcing
4. Multi-chambered frame and sash to enhance strength, stability and overall thermal performance

Sidelite

The KV Imperial Patio Door sidelite extends the width and/or height of any KV Imperial Patio Door. The main frame and sash sightlines combine to replicate the look of the patio door panels, creating a seamless transition between the patio door and sidelites.

Custom Colour

Express yourself through colour

Choose from 31 standard paint finishes and 10 standard stain finishes for the interior and exterior of your door. We'll match any colour you desire. We use a premium paint formula for fade resistance and colour retention. Our water-based paints are environmentally responsible.

▶ **Disclaimer:** The colours shown are for representation only. Please consult a KV dealer for the KV colour chart to obtain accurate colours.

Technology
More than just a great view.

KV Custom Windows & Doors proudly offer beautifully designed products with state-of-the-art technology, providing your home with the pinnacle of energy, security and longevity.

Thermal Insulation

Protection from outside temperatures.

Low E Coating is an applied metallic coating that provides added protection against harmful UV rays and keeps your home insulated against energy loss during all seasons. The layers of transparent silver allow the glass to reject the sun's heat in the summer and reflect furnace heat back into your home in the winter.

Argon Gas is an inert, low moving gas that gives the best thermal performance possible. Replacing the air between the panes of a glass unit with Argon Gas, heat loss is prevented.

Low E and Argon Gas are standard on all KV Windows, Entrance Doors, and Patio Doors, creating the most balanced energy performance for both winter heatings and summer cooling.

Cold Weather
Radiant heat is kept inside your home during winter.

Warm Weather
UV is reflected back out in the summer.

KV Lifetime Warranty

So you can relax.

KV Custom Windows & Doors takes pride in offering our customers an industry leading "Limited Lifetime Fully Transferrable" warranty. We give every Window, Entrance Door, and Patio Door our undivided attention and warrants that our products will be free of any material or manufacturing defects. We offer our Lifetime Warranty on solid PVC white and cream colours against blistering, peeling, flaking, cracking or fading. Windows and doors with exterior paint have a 15-year warranty.

The Energy Star Program & Test Results

Energy efficiency at its best.

The Energy Star Program helps homeowners make educated choices when purchasing new windows and doors. KV Custom Windows & Doors complies with all of Canada's four regions and offers maximum insulation during the coldest winters, hottest summers, and every day in between. Our products meet the Energy Star Program guidelines for helping businesses and individuals protect the environment through the superior energy efficiency.

Protecting the Environment

Making a positive impact on the planet.

At KV Custom Windows & Doors, we are proactive in controlling waste by recycling all unused raw materials in our manufacturing processes, including PVC, steel, fiberglass, glass, paper and cardboard. We also partner with Royal Plastics & Guardian Glass to design new products that help reduce in-home energy costs.

Condensation

Minimize the likelihood of moisture.

What is Condensation?

Condensation is the formation of moisture that appears on the inside surface of a window or glass doorlite. It often occurs in winter when the warm air inside the house is higher than colder temperature outside. The higher the moisture levels in the air inside the house, or the colder the temperatures outside, the heavier the condensation.

Condensation occurs first around the edge of the glass unit, where surface temperature are coldest. If a standard "aluminum" spacer exists, condensation will form on the glass edge when temperatures fall, even if there is minimal humidity indoors.

KV Custom Windows & Doors values being innovative and are always searching for solutions to make life easier for customers. KV Custom Windows & Doors provide customers with industry leading products that reduce the amount of maintenance required in their home.

Strength Classification

The Super Spacer® has been tested using the toughest durability test, the P-1 chamber. Tests are done on a weekly basis, consisting of bombarding KV Custom Windows & Doors products with humidity and UV exposure.

White "S" Class Super Spacer®

All KV Custom Windows & Doors insulated glass units come standard with the industry leading warm edge spacer system, the White "S" Class Super Spacer®. The patented Super Spacer® is the only non-metal spacer manufactured out of 100 percent polymer foam offering performance qualities greater than any other spacer system. Super Spacer® is placed around the edges of the glass unit, reducing the occurrence of condensation.

Let's talk

We welcome the opportunity to provide you with more information about the benefits of the White "S" Class Super Spacer®, and how it minimizes the occurrence of condensation in your glass units today, tomorrow, and for the life of your KV Windows & Doors. Please contact your local KV dealer to better understand your insulated glass unit options.
